JOHNSON'S COOL CLEAN FOR COOLING SYSTEMS Part No. 39-00 Series

DESCRIPTION:

Johnson's Cool Clean is a special package of additives developed to add life to automotive cooling systems. It lubricates, retards corrosion and helps prevent cooling systems from plugging up.

USAGE:

For best results, after back flushing the system, add a proper mixture of antifreeze and water, then add Johnson's Cool Clean and run the engine for five (5) minutes for uniform disbursement.

Johnson's Cool Clean is effective for all types of automobile cooling systems, and is compatible with copper, brass, plastic tanks, aluminum, cast iron as well as rubber hoses and gaskets commonly used in automotive cooling systems.

Cool Clean was *not* designed for use in large truck radiators or for off-the-road equipment.
